FARM STORAGE TANKS

For Convenient On-Site Fuel Storage

Clawson's elevated Farm Storage Tank is designed for convenient storage and for dispensing fuel at farms and limited access commercial sites. The elevated 36" or 80" tall standard stand for gravity discharge

eliminates the need for a pump. The Farm Storage Tank can also be equipped with the required fittings for fuel handling equipment, including a gravity flow meter. Standard sizes are 300 and 560 gallons. To pro-

tect the tank from elements they are painted with an industrial, weather resistant red enamel.

To meet secondary containment requirements, heavy-duty steel dikes are available.

Clawson's Farm Storage Tanks are in stock and ready for immediate pick up or delivery.

Farm Tank Sizes and Dimensions

Capacity	Diameter	Length	Thickness	Weight
330-gallon	38"	60"	14-gauge	250 lbs
